

Subset calibration report: conditional odds ratio

Sentinel Subset Calibration Workgroup

2024-10-15

Contents

Results	1
5-year self-harm or hospitalization	1
1-year self-harm	4

The tables in this section contain performance for estimating the conditional odds ratio (cOR) using plasmode simulation.

Results

5-year self-harm or hospitalization

Table 1: **Plasmode data simulation: 5-year self-harm or hospitalization, regression functions are glms, oracle conditional odds ratio (cOR).** Relative performance of estimators with sample size $n = 50,337$ and 1000 simulation replications. The value of the estimand is -0.206. ESE = empirical standard error, ASE = asymptotic standard error, MAD = mean absolute deviation, RMSE = root mean squared error, rRMSE = robust RMSE (using median bias and MAD), Oracle coverage = coverage of a confidence interval based on the ESE, Nominal coverage = coverage of a confidence interval based on the ASE.
